

Complimentary Modernization Assessment

Speedware's complimentary modernization assessment is a valuable tool for companies in the early stages of modernization planning, providing preliminary recommendations, options, costing and advice.

Gathering the information required to develop a sound modernization strategy can take months of research or it can be as simple as calling Speedware for a Complimentary Modernization Assessment.

Speedware understands that developing a modernization strategy can be a daunting process for many organizations. While you may be aware that modernization can result in improved agility and reduced costs, you may not be aware of the best way to proceed. Our complimentary modernization assessment (CMA) is a free education-oriented service that provides information about the modernization options available to you and highlights the modernization strategy that best meets the needs and goals of your organization.

What We Do

Speedware conducts an onsite or telephone interview with your team to gather basic information about your applications, databases, hardware and third-party software as well as your business objectives and technology standards. Based on this information, Speedware performs a modernization assessment and prepares a report which will include:

- Recommended overall modernization strategy
- Scope, project duration estimate and pricing estimates for hardware, databases, application modernization technology and consulting services
- A spectrum of various project delivery models with emphasis and detail on the customer-preferred model
- Suggested next steps in the process

- **Overall Modernization Strategy**

The CMA contains Speedware's recommendations regarding the overall strategic direction for your IT modernization. The advantages of the recommended

modernization course are highlighted as well as the challenges that are likely to be encountered along the way.

- **Scope, Project Duration and Pricing Estimates**

The CMA provides a preliminary estimate of the project duration as well as pricing estimates for hardware, software, utilities, applications, database management systems and professional consulting services.

It includes a discussion of the various available alternatives, highlighting the pros and cons of each choice.

- **Project Delivery Models**

Speedware offers a variety of migration project models ranging from do-it-yourself models right up to fully outsourced projects. You can choose to give Speedware full ownership of the modernization project - or simply have us perform certain portions of the job. We allow you to choose the model that best meets your needs and provides the right balance between budget and resource constraints.

- **Next Steps**

The CMA is the first step in a complete and proven modernization methodology and the information it provides is based on discussions with your team.

Your next steps will depend upon the modernization options available, your organization's goals, your budget and the internal resources you have on hand. Some customers may choose to continue their analysis with a Detailed Modernization Analysis (DMA) while others may choose to begin a modernization project immediately.

SPEEDWARE

Complimentary Modernization Assessment

Speedware's Modernization Expertise

Speedware has helped guide countless organizations through the phases of a successful modernization project. Our portfolio of end-to-end solutions includes a wide array of automated tools and professional services.

Speedware possesses significant experience with a wide variety of development languages, platforms, databases, and third-party utilities.
